

Robert J. Lindquist, P.E., Inc.

Austin • Orlando

Over Three Decades of Proven Construction Experience

Since retiring from a full-time highway and heavy construction career in 2003, Robert Lindquist has worked independently in various capacities for a variety of clients that include contractors, owners, engineering firms, toll road authorities and attorneys, as well as the Florida and Texas Departments of Transportation. He has worked independently to provide opinions, monitor or resolve disputes and to render decisions where negotiations have reached an impasse.

Robert approaches every assignment independently; he has been an expert witness for the prosecution and the defense as well as owners and contractors. His training, education, and extensive experience gained during his 30+ year construction career are used in the analysis of issues from every side of an issue.

Over the years, Robert has handled many large construction disputes in trial, arbitration, mediation and dispute review boards. He continually stays updated on the latest trends in data analysis as well as CPM scheduling. Where applicable, he utilizes various statistical methods and mathematical modeling techniques, such as:

- Probability Analysis – probability of an occurrence being true
- Hypothesis Testing –testing different hypotheses for their relevance and viability
- Changepoint Detection – searching data to find the point where things began to change
- Segmentation – splitting an issue into areas or distinct parts to analyze it in greater detail
- Null Hypothesis – the justifiable analysis of chance, probability or zero coincidences

These are just a few of the possible mathematical methods that can be utilized to prove or disprove a certain position. Some of these methods have been accepted by the courts to prove a theory.

Certifications

- TxDOT – Construction Management
- TxDOT – Construction Inspection
- FDOT – Dispute Review Board (DRB) Member
